In this talk and panel discussion, I will give my insight into the similarities and differences in scientific training between the USA and Europe. Originally from Texas, after completing my BA and PhD in the USA (Massachusetts and California) I then moved to Germany for a postdoc before starting my group in Austria two years ago. I'll discuss the structure of academic education and training, connections to industry and non-academic scientific careers, and current hot topics and funding opportunities. I'll also address culture, both within and outside of the lab and into the gastropubs. Finally I'll include some tips for those who may be interested in pursuing part of (or the rest of) their careers in European science.
